SALES TERMS AND CONDITIONS

FREIGHT/DELIVERY

All deliveries within our delivery territory will be made FREE of charge unless the nature of the delivery is unusual due to special handling and for timing requirements.

Unless prior arrangements have been made, we require the customer's presence and assistance with receiving our delivery.

RETURN POLICY

Any customer returning material must first contact Eastern for a return authorization within five days. **No returns on wood or vinyl products.** Any returns shipped without authorization will not be accepted. Eastern requires the returned goods to be properly packaged and in the same condition as was originally received. Eastern reserves the right to inspection on returned products prior to approving the final credit memo.

A minimum restocking charge of 20% (minimum \$35.00) will be charged on all material returned unless the return results from our error.

SPECIAL ORDERS

Eastern prefers to receive a written purchase order when a special or non-stock item is being purchased. However, as a convenience to our customers, we will accept verbal orders. We may require a non-refundable 50% deposit or advance payment depending upon the nature of the order. Once ordered, there can be no cancellation or return on special orders.

QUOTATIONS, SPECIFICATIONS & CERTIFICATIONS

Quotations will be given based upon the customer's breakdown of the material requirements. Eastern will gladly assist in helping you with the quoting of material, however, we are not responsible for products ordered incorrectly.

When material being purchased is required to meet certain specifications and/or certifications will be required, we must be notified at the time the order is being placed.

CATALOG CHANGES

As you will notice, this catalog is very comprehensive and even though we go to extreme efforts to keep it updated it would be impossible to update it for every change that may occur. Therefore, product information and prices shown are subject to change without notice. We are also not responsible for typographical errors.

Why Eastern Chain Link & Specialized Fence?

Eastern Chain Link Fence

Eastern Fence has the largest pipe & chain link fence inventory in the Northeast! We carry a complete line of chain link pipe products including every residential or commercial application you could imagine. We supply it all.

INCLUDING: GALV, SCHEDULE 40, 8-5/8" PIPE (Industry Leader), ALL SS PRODUCTS, FABRIC, PIPE & TUBE, FITTINGS, GATES & KENNELS, SPECIALTY FENCE

IN STOCK AND AVAILABLE FOR NEXT DAY DELIVERY

System21™

System 21 vinyl coated color chain link fence system is available in your choice of green, black, and brown. Our exclusive coating process bonds a tough resilient protective layer of polyester powder coating over extra heavy gauge pipe, gates, fittings and wire, giving the entire system an attractive finish with an extended durability that will last for many years.

Eastern Temporary Fence & Privacy Screens

Eastern Temporary Fence Panels are perfect for construction sites, domestic housing sites, sporting events, special events, concerts, crowd control, and a wide range of industrial and engineering applications. Eastern Temporary Fence is modular fence designed to meet or exceed industry standards. Eastern Temporary Fence panels (ETF) are easy to install and tear down. They are freestanding, easy and safe to assemble, and reusable.

Pen Pals™

PenPals™ portable pet runs are made of high quality welded construction and have a galvanized steel framework. They have a smooth finish galvanized fabric, are portable and free standing, have an easy 1, 2, 3 installation and a limited warranty.

Eastern Hedge and Privacy Slats

Eastern Fence Chain Link Fence Slats are extruded from High Density Polyethylene (HDPE), color pigments and ultra violet (UV) inhibitors, specifically designed to inhibit the harmful effects of sunlight and lengthen the life of the product. The only exceptions are Winged Slats which also include Ethyl Vinyl Acetate (EVA), which is a softer plastic to keep wings flexible and resilient. Eastern Fence Products are resistant to: severe weather conditions, salt water, sand, road dirt, most acids, alcohol, alkaline, ammonia, petroleum distillates, and common environmental pollutants.

ORDERING CHECKLIST

Please Have Your Material List Ready To Go When You Call

Being that Eastern Chain Link Fence products are sold wholesale to the trade, it is highly suggested that you have a material list for your order prior to calling. Please feel free to use this checklist and the "CHAIN LINK ORDERING SHEET" as a guide prior to your call.

Wire

Also known industry wide as the fabric of the chain link fence. This is the finishing touch to complete your chain link fence.

Gates

Don't forget your gates! Walk gates, drive gates, rolling gates, cantilever gates, overhead gates, barrier gates, and internal slide gates. Residential or Industrial. (NOTE: Remember for each Eastern Chain Link Fence gate opening, you should order wider diameter and heavier gauged posts.)

Posts & Rails

When ordering your posts, you should check the post spacing chart in the Eastern Chain Link Fence Installation Instructions. This will help you in knowing the length and spacing required for your fence installation. Gate posts are usually bigger than terminal posts. Line posts are your unity during a run of chain link fence. Top, middle, or bottom rails are also an important part of your fence installation, but not always necessary. It depends on the job requirements and/or specifications.

Post Caps

Terminal post caps, line tops, and gate caps are all a necessity when installing your Eastern Chain Link Fence.

Hardware & Fittings

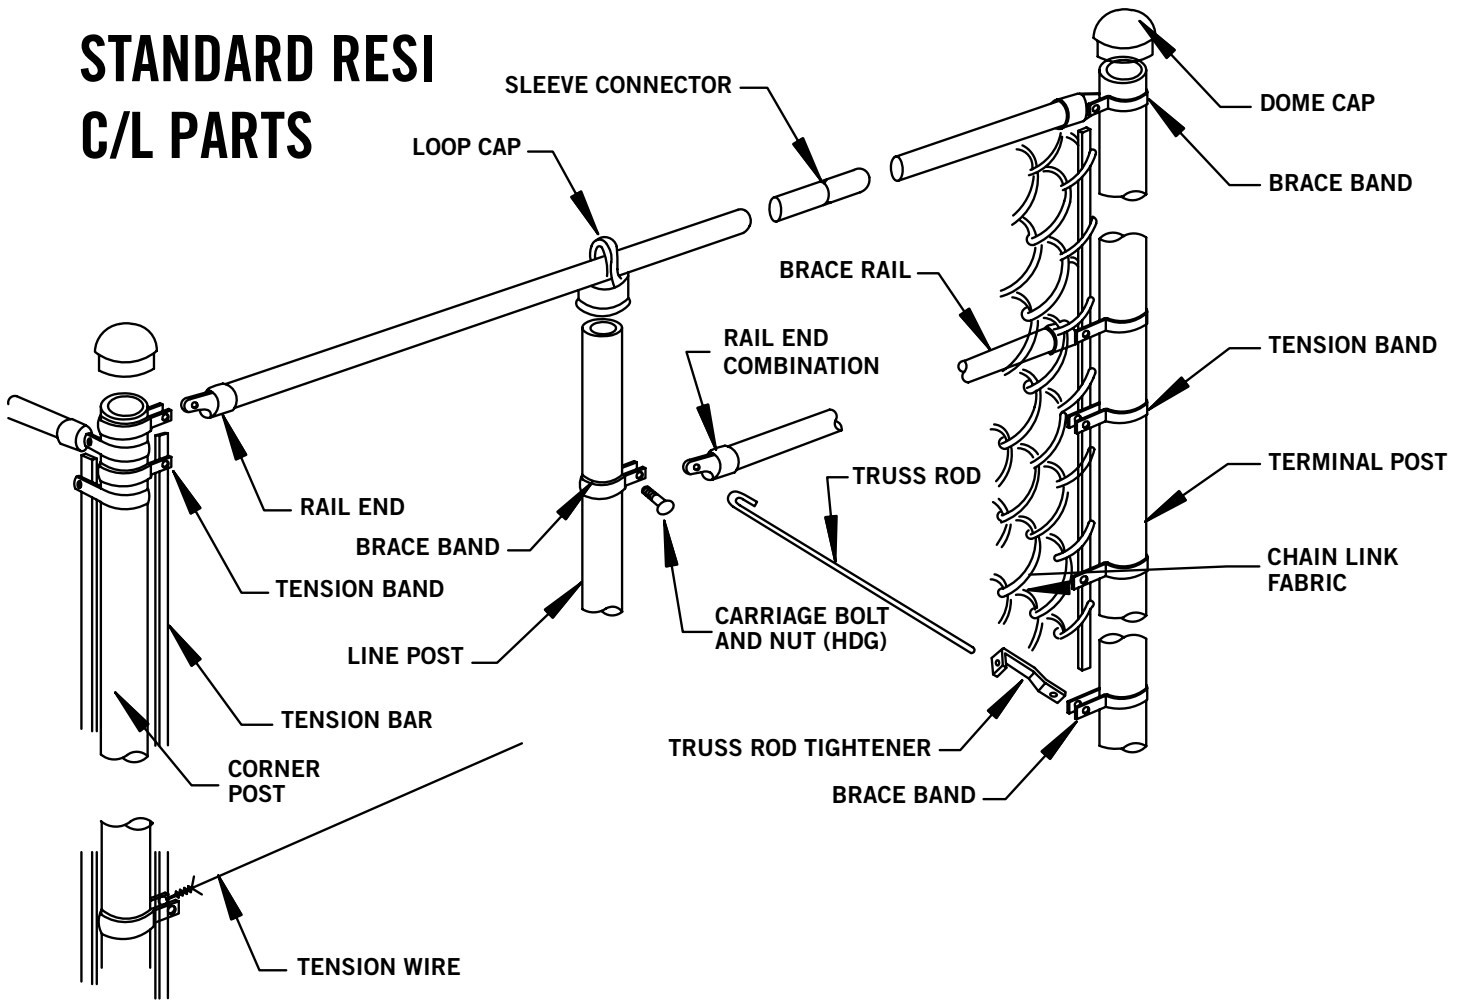

- Hinges - Pressed steel or malleable, residential or commercial
- Latches (oarlocks, self-latching auto latches, Magna-Latches, and industrial locking devices)
- Drop rods and guides (Residential and Commercial)
- Spring closers (Sold separately for posts up to 2-1/2". Modifications can be made to retro fit other size posts.)
- Tension bands, brace bands, rail ends, tension bars, fence ties, boulevard and end-clamps, coil wire, nuts and bolts and more...

Order Process

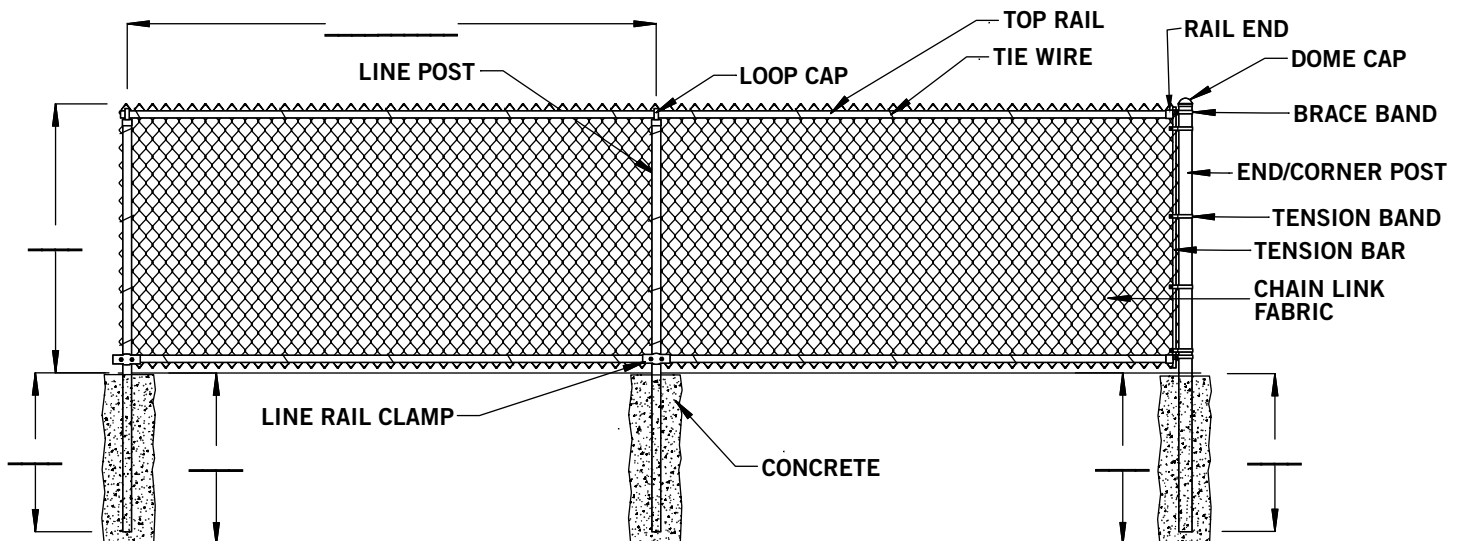

Orders may be submitted by calling (631)-698-0900 or (800)-339-3362, faxing to (631)-698-6408 or (800)-788-0411, or e-mailing to sales@easternfence.com.

HINTS FOR ERECTING CHAIN LINK FENCE

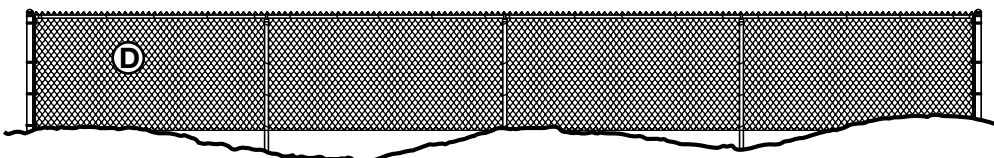

A Even grade between terminal posts

B Level grade

C Fence following grade

D Level grade with rolling terrain

HOW TO ERECT CHAIN LINK FENCE

STEP 1 - SURVEY PROPERTY LINES

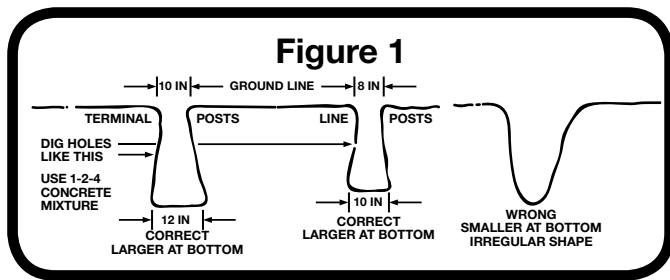

Be sure that the desired location of fence lines do not exceed property lines. This is very important. We recommend that all posts be set approximately 4" inside of the property line to avoid encroaching on adjoining property with the concrete foundations. This may be done by stretching string or chalk lines on the property line and setting posts approximately 4" inside of them.

STEP 2 - LOCATE AND SET TERMINAL POSTS

First determine the location of end, corner, and gate posts (which are referred to as terminal posts).

Distance between gate posts is determined by adding the actual width of the gate to an allowance for hinges and latches. Single walk gates require 3¾" for hinges and latches and double drive gates require 5½". For example, a 3 foot walk gate should measure 32¼" wide. Adding 3¾" to the width means that the distance between posts (inside face to inside face) should be 36". (See Figure 13.)

Now, dig the holes as shown below in Figure 1. (To determine depth of hole see Figure 2 - Measurement C.)

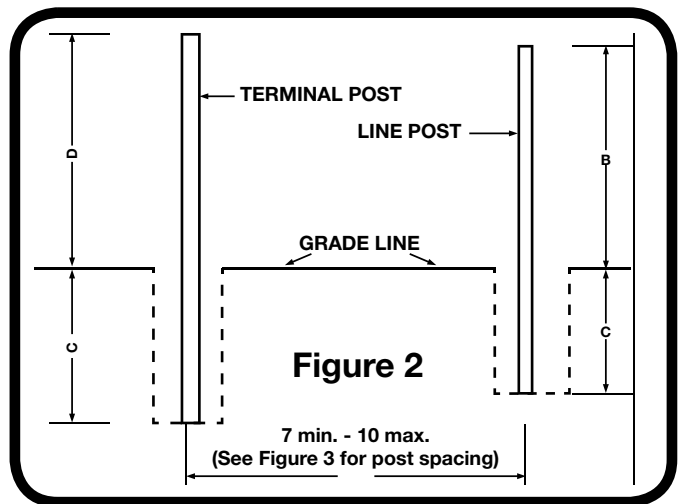

Next, mark all posts with crayon or chalk for the correct height of fence you are installing (see Figure 2 →). Terminal posts should be set 2" higher than the width of the fabric and line posts 2" lower than the fabric width.

Set the terminal posts in concrete using a concrete mix as follows: 1 part cement, 2 parts sand, and 4 parts gravel. Mix a fairly heavy solution as too much water weakens concrete and may cause cracking. Use a carpenter's level to set posts plumb. Crown all post footings for water drainage by sloping concrete away from post.

WARNING: WHEN DIGGING POST HOLES WATCH FOR AND CHECK OUT ANY UNDERGROUND CABLE OR PIPE LINES AND CONTACT YOUR LOCAL UTILITY.

STEP 3 - LOCATE AND SET LINE POSTS

Mark the grade line on all line posts measuring from the top down as shown in Figure 2. Then measure the distance between terminal posts and check line post spacing chart (Figure 3 below) for exact distance to allow between line posts.

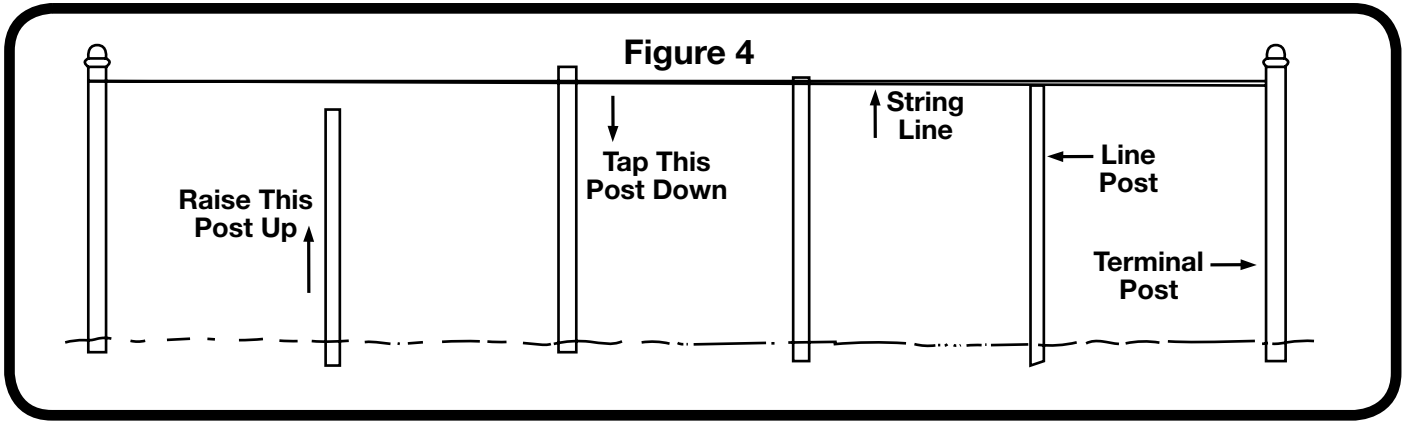

*MEASUREMENT C - Depth that post will be in the ground will be determined by lengths of posts being used, after A or B dimension is subtracted from overall length of posts.

Fence Height	A	B	C
3' 6"	44"	40"	*
4' 0"	50"	46"	*

47 ft.	9 ft. 5 in.	67 ft.	9 ft. 7 in.	87 ft.	9 ft. 8 in.	108 ft.	9 ft. 9 in.	128 ft.	9 ft. 10 in.
48 ft.	9 ft. 7 in.	68 ft.	9 ft. 8 in.	88 ft.	9 ft. 9 in.	109 ft.	9 ft. 10 in.	129 ft.	9 ft. 10 in.
49 ft.	9 ft. 9 in.	69 ft.	9 ft. 10 in.	89 ft.	9 ft. 10 in.	110 ft.	10 ft.		
50 ft.	10 ft.	70 ft.	10 ft.	91 ft.	9 ft. 2 in.	111 ft.	9 ft. 3 in.		

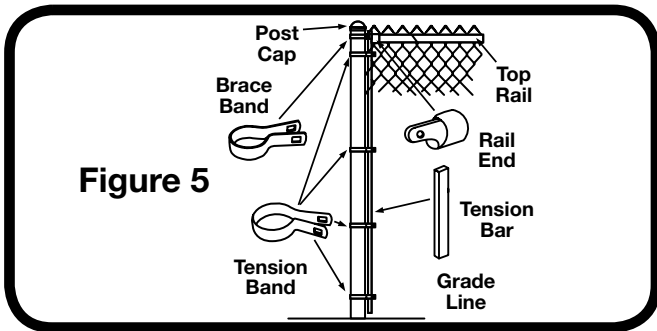

Next, stretch a masons line from outside of terminal posts to outside of terminal posts (be sure the concrete has set up sufficiently so as not to lose plumb). The line post holes should be lined up so that when they are set in the center of their holes, their centers will line up with the terminal post centers. This means the outside faces of the line posts will be about 1/4" inside of the line stretched between the outside of the terminal posts. Now dig the line post holes and set the line posts.

Next, stretch your masons line taut four inches below terminal post tops and use as a guide to align height of line posts (see Figure 4 above). If necessary to adjust height of any post either up or down, simply raise or lower post as illustrated before concrete sets up. Use your level to keep plumb while adjusting post height.

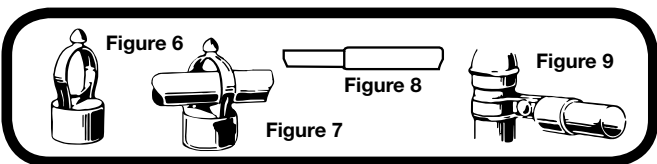

STEP 4 - APPLY FITTINGS TO TERMINAL POSTS

Check material list and fittings identification chart. After the posts have been installed and the concrete allowed to set, slip tension and brace bands on terminal posts. (See Figure 5.) The tension bands should be spaced approximately 10-12" apart. Do not spread or distort bands. All bolt heads for bands are on the outside of fence and the threaded ends are on the inside. Then apply all terminal post caps.

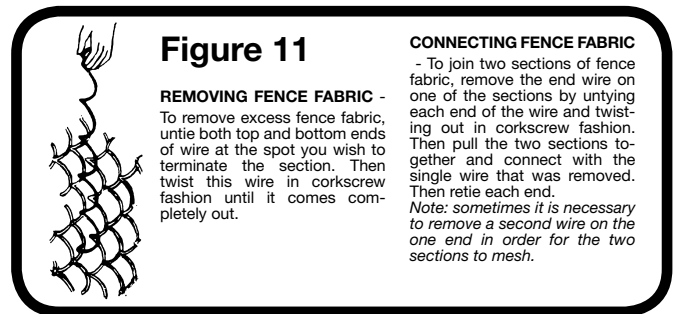

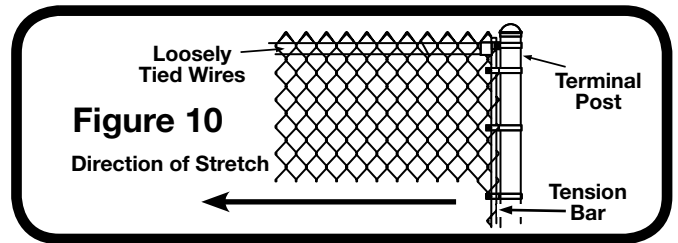

STEP 5 - APPLY TOP RAIL

Next, attach loop caps. (See Figure 6.) They are set with the top rail hole offset toward the outside of the fence making flush the outside face of the top rail through the loop caps. (See Figure 7.) Join the top rail with swaged end where required. (See Figure 8.) End of the top rail fits into rail end fittings on the terminal post. (See Figure 9.)

STEP 6 - HANG FABRIC

After assembling the framework, unroll the fabric on the ground along the fence line starting at a terminal post. Then slide tension bar thru the last link in your fabric and attach this combination to the terminal post using tension band and bolts provided. (See Figure 10.) If more or less fabric is needed to span the opening, an additional amount can be connected or removed as shown in Figure 11. The fabric should be on the outside face of all posts and loosely attached to the top rail by a tie wire.

STEP 7 - STRETCH FABRIC

Fabric should be stretched from the terminal post already attached to the opposite terminal post. Insert tension bar in end of fabric and attach fence stretcher to bar (ratchet type power pull, large carpenter's clamps, block and tackle, or similar device may be used. Most wire stretching tools of this type can be rented or borrowed locally.)

As you stretch the fabric test it for tension (it is stretched enough when it gives slightly). The top of the fabric should be located approximately 1/2" above the top rail to insure proper height. After fence fabric is sufficiently tight, remove the excess fabric as shown in Figure 11, and connect the tension bar to the post with tension bands. Also fasten the fabric to the top rail and line posts with tie wires spaced approximately 18" apart.

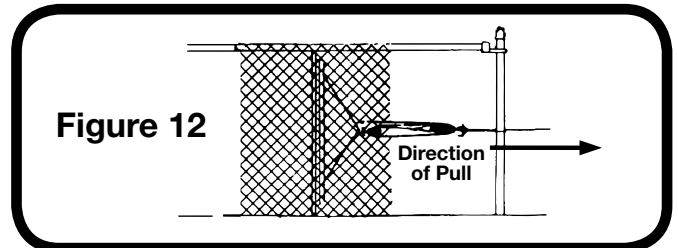

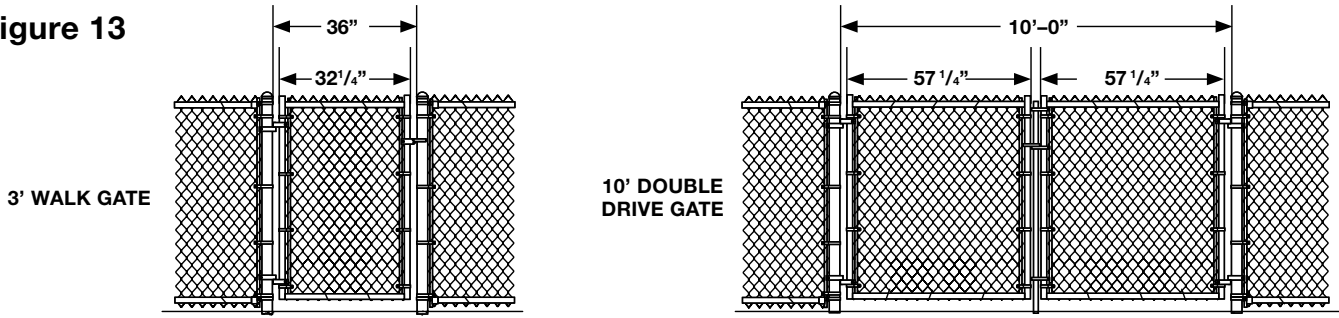

Figure 13

STEP 8 - HANG GATES

After the entire fence has been completed, apply male hinges to one of the gate posts, hanging the top hinge upside down thus preventing the gate from being lifted off. Loosely apply female hinges on the gate frame and slip them onto the male hinges that have been installed on the gate post. Set hinges to allow for full swing of the gate and align the top of the gate with the top of the fence. Tighten all hinges securely. Install gate latch for single gates. For double gates, use the same procedure as on walk gates but install center latching device (fork latch).

MATERIALS NEEDED FOR RESIDENTIAL CHAIN LINK FENCE

PIECES	ITEM-DESCRIPTION	QUANTITY TO USE	<p style="text-align: center;">TOOLS YOU WILL FIND USEFUL WHEN INSTALLING YOUR CHAIN LINK FENCE</p> <ol style="list-style-type: none"> 1. Post hole digger 2. Wheelbarrow, shovel and hoe to mix and transport 3. Tape measure 4. Level 5. String and stakes or mason's line 6. Hacksaw or pipe cutter 7. Pliers 8. Fence stretcher (block & tackle, ratchet type power pull, etc.) 9. 1/2" x 9/16" wrench or crescent wrench
(1)	Fabric (50 feet per roll)	Divide total footage by 50 and round up	
(2)	Top Rail Swedged End 1 3/8" or 1 5/8" O.D.	Total footage	
(3)	Line Post 1 5/8" or 2" O.D.	Divide total footage by 10 and round up

CUT PIPE

Call for Quote

PHYSICAL PROPERTIES

Framework is manufactured from high tensile steel and cold-formed for exceptional strength. SS40 fence pipe is manufactured in full compliance with ASTM F-1043.

SUPERIOR CORROSION RESISTANCE

After the in-line galvanizing process, a three mil. coating of high-quality color polyester is applied and heat set.

DURABLE FINISH

The result is a durable finish that will retain its beauty for years to come even under the most severe conditions.

Barbed tape products are not designed or intended for residential application. These products are not to be used as ground barriers on commercial applications. Ground barriers should only be used in locations such as military installations and correctional facilities. The manufacturer recommends that all barbed tape be installed on existing fences or walls not less than 7 ft. above ground level. This material shall also be installed in such a manner as to present a clear and highly visible element of danger, and to avoid any and all contact with pedestrian traffic. Do not attempt to conceal, disguise, or transform these products under any condition or application. Eastern disclaims legal accountability from any and all damages, claims, and legal actions as the result of injury caused by improper installation or failure to comply with the relevant laws, codes, and ordinances applicable to these products. Be certain to check all local regulations governing security fencing products, and specific zoning requirements and restrictions as they may apply. The use of protective gloves and proper installation tools by experienced personnel is recommended.

ROLLING GATE KITS

ROLLING GATE KITS

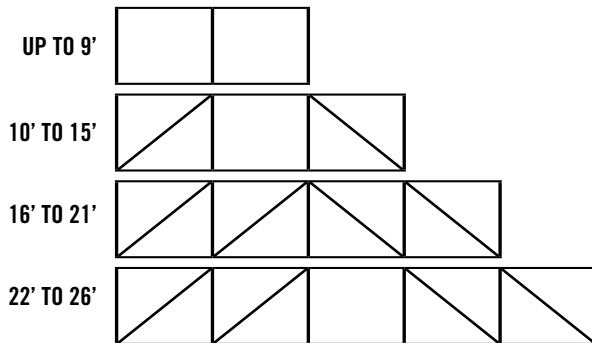

Item No.	Description	LOOSE
H-128KIT	Rolling Gate Kit	

Kit Includes:

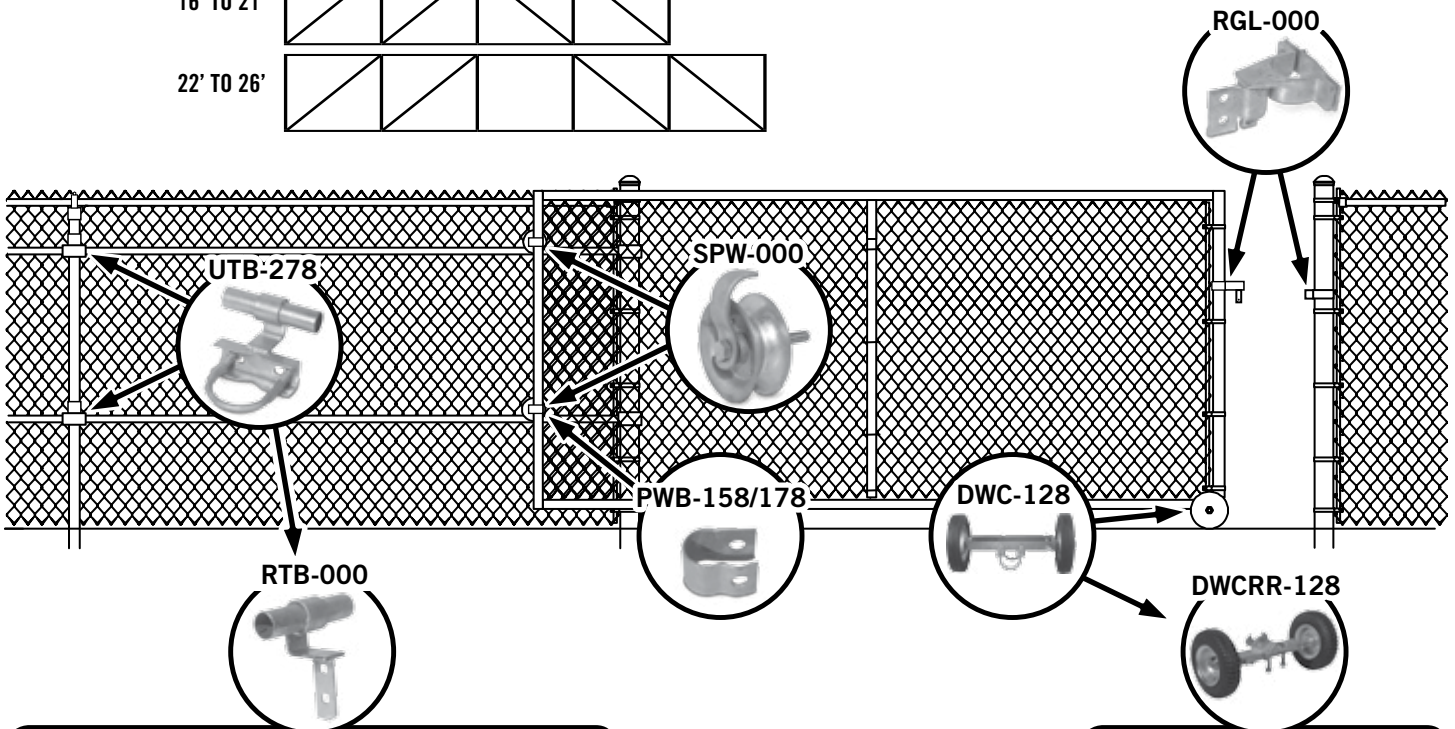

- 1 Each - #DWC-128 12" wide carrier with 8" wheels (*OPTIONAL pneumatic wheels)
- 1 Each - #RGL-000 Latch (Req. 2 brace bands - not included)
- 6 Each - #UTB-278 Universal Track Bracket (2", 2-1/2" or 3" O.D.) - (*OPTIONAL for 4" Post RTB-000)
- 2 Each - #SPW-000 Track wheels
- 2 Each - #PWB-158 Wheel brackets for 1-5/8" frame
- 2 Each - #PWB-178 Wheel brackets for 2" frame

NOTE: "BEVELED BRACE BANDS" are recommended wherever attaching bands are required.

FRAME CONFIGURATION

ROLLING GATE HARDWARE

*OPTIONAL - To be used with 4" pipe with brace bands

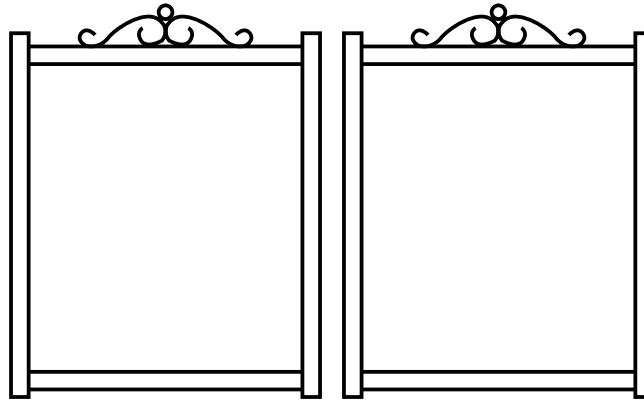

*OPTIONAL - Pneumatic wheels

INTERNAL SLIDE GATES

SLIDE GATES

CALL FOR QUOTE

One of the industry's most versatile gates, Eastern Slide Gates cover a wide range of applications. From airports, warehouses, and military facilities, to industrial storage yards, housing sites, and even prisons, Eastern Slide Gates are the professional's choice.

Eastern Slide Gates use a unique roller bearing system sealed above in a one piece enclosed track to provide maintenance free performance. With no roller bearings on the ground to trap debris, operation of the gate is always smooth and easy. Added stability and strength are provided by a vertical member securely welded to the one piece track member.

Constructed of a high quality aluminum, Eastern Slide Gates are both light weight and durable. A chain link fabric is secured to the gate frame on all four sides with J-bolts. This makes for a much more stable gate then those secured in conventional ways.

A color coated finish is an added available option to match any color requirement you may have. Eastern's color coated fence option is always the perfect quality touch. If a specialized gate fits the bill, let our custom design team develop the perfect gate for your needs.

Eastern Internal Slide Gates are custom made to fit your opening. There are 2 parts of a cantilever gate. The part which covers the opening, and the back section called the "counter balance," (which is a minimum of 40% of the opening). I.E., a 20' opening has a minimum of an 8' counterbalance.

The track of your Eastern gate and the member of the gate frame are a one piece aluminum extrusion. There are no bolt-on tracks. All other members of the frame are welded to the top member. Unlike some similar gates that bolt together, your Eastern gate will be trouble free for many years.

Because the track is at the top, there are no ground rollers. There are guide rollers on the post that keep the bottom of the gate from swaying.

The top roller assemblies each have 4 factory lubricated and sealed roller bearing wheels that operate inside the track. Because they are inside the track, they are unaffected by ice, snow, dirt, or other debris.

Fabric Stretched 4 Ways to Support the Fence

The "infill" of a Slide Gate helps to support the frame. When a chain link infill is desired, the chain link fabric is stretched 4 ways. This means that each strand of the wire acts as a truss to support the frame. Most manufacturers stretch their fabric in only one direction. In that case, the fabric works against the frame by merely adding weight.

Eastern Internal Slide Gate Specifications:

1. Scope:

This specification covers materials and construction requirements for Eastern Chain Link Cantilever Slide Gates with enclosed track and hardware, up to 8' high.

2. Reference Standards:

ASTM B221 & F1184 TYPE II, CLASS 2

3. General

- A. Gate frame made of 2" square aluminum tubing the alloy and temper to be in accordance with 6063-T6. Tube shall be 0.94 lbs./ft. All members welded into a rigid 1-piece unit. There will be 2 truck assemblies, each having 4 factory lubricated and sealed roller bearing wheels that operate inside the track. A cantilever overhang support panel shall be provided for each leaf of the gate. The overhang shall be a minimum of 40% of the opening.
- B. Chain link fabric shall be installed using hook bolts that are inserted through pre-drilled holes in the frame. To these hook bolts the fabric will be attached by means of a tension bar which is laced through the last link of the fabric. The hook bolts are 15" on center and on all 4 sides of the gate.
- C. Diagonal adjustable 3/8" galvanized truss rods shall be provided inside each panel of the gate. All 8' sections shall have a double rod (one in each direction).
- D. The track and top-rail aluminum extrusion combination weighing 3.72 lbs./ft. shall withstand a 2,000 lb. reaction load.
- E. Truck assembly is a swivel type with a galvanized steel base unit and 4 lubricated sealed ball bearing rollers. Each roller is 2" in diameter and 9/16" in width. The truck shall have 2 side rollers to assure alignment inside the track. Truck assemblies are held to post using a 5/8" galvanized bolt. Truck assembly to withstand a 2,000 lb. reaction load.
- F. Gate post brackets, latch and keepers are galvanized steel.

4. Installation

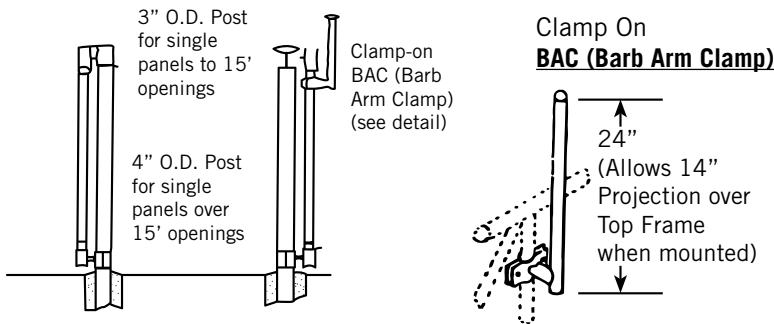

Gate posts are to be set into concrete (3,000 PSI). The footing shall be 3'0" deep and 16" in diameter. The 4" O.D. posts should be 3'0" (approximately) into concrete footing. Posts must be plumb. Install gates making sure they are free of obstructions. Adjust for smooth operation.

DECORATIVE SLATS and HEDGE

“VPS” DECORATIVE SLATS

"VPS" Decorative Slats are made from high density virgin polyethylene with special ultra-violet inhibitors to insure longer life. Regular Slats are flat and tubular in shape and pre-notched for insertion of horizontal retainer. “VPS” slats carry a full 10 year warranty against fading and breakage. Regular slats have approx. 80% coverage and winged slats approx. 95% coverage.

FOR 2" MESH (Others Available)

Eastern Wood & Steel Guard Rail

Did you know that Eastern Fence is also one of the largest suppliers of Guard Rail?

Eastern Fence carries a terrific supply of wood and steel guard rail products for your safety needs. **Guard rail** or **guardrail**, sometimes referred to as **guide rail**, is a system designed to keep people or vehicles from (in most cases unintentionally) straying into dangerous or off-limits areas.

WOOD GUIDE RAIL

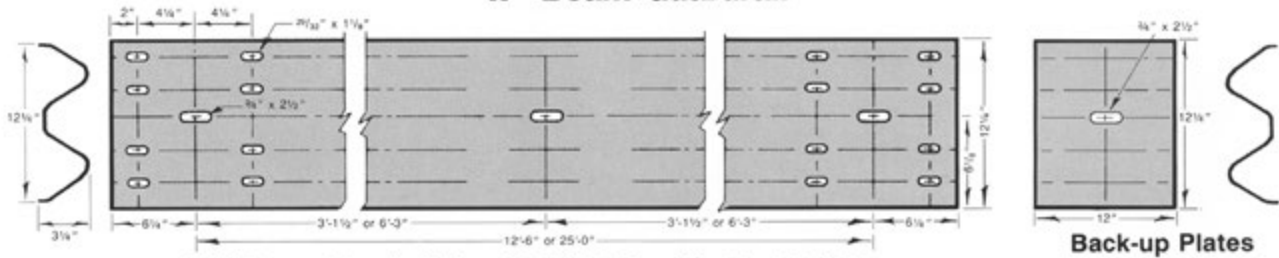

Guardrails are used in a facility setting to protect a company's greatest assets which include their people and expensive equipment.

In traffic engineering, highway guardrail may prevent an errant vehicle from impacting roadside obstacles which may be either man-made (sign structures, culvert inlets, utility poles) or natural (trees, rock croppings), running off the road and going down a steep embankment, or veering off the roadway into oncoming traffic.

DEER FENCE

DEER8 (TENAX C-FLEX)

Once installed, DEER8 / DEER8-100 are virtually invisible against your landscaping. The fence are recommended for areas which experience light to moderate deer traffic. Popular with both landscapers and professional installers, DEER8 / DEER8-100 can be used to enclose the perimeter of your property or smaller areas such as gardens.

Item #	Roll Dimensions	Mesh Size	Rolls Per Pallet	Each	20+
DEER8	7.5' High - 330' Per Roll	1.77" x 1.97"	20		
DEER8-100	7.5' High - 100' Per Roll	1.77" x 1.97"	20		

DEER8HD (TENAX C-FLEX P)

The "HD" stands for premium strength. Like DEER8, DEER8HD is virtually invisible once installed and is recommended for areas that experience heavy deer traffic.

Item #	Roll Dimensions	Mesh Size	Rolls Per Pallet	Each	20+
DEER8HD	7.5' High - 164' Roll	1.77" x 1.97"	25		

DEER8XH (TENAX C-FLEX HEAVY)

DEER8XH is the heaviest grade product, ideal for professional installers in areas with large deer traffic.

Item #	Roll Dimensions	Mesh Size	Rolls Per Pallet	Each	20+
DEER8XH	7.5' High - 100' Roll	1.77" x 1.97"	25		

WOVEN WILDLIFE FENCE

Woven Steel - Hot Dip Galvanized - or Black | Graduated Sizes 6" Wide Spacing - Class 3
6 Lines of 3" - 2 Lines of 4" - 2 Lines of 5" | 3 Lines of 6" - 6 Lines of 7"

Item #	Height	Roll Size	Rolls Per Pallet	Per Roll
FF2096612	7.5' High	330' Per Roll	6	
FF2096612-BK	7.5' High	330' Per Roll	6	

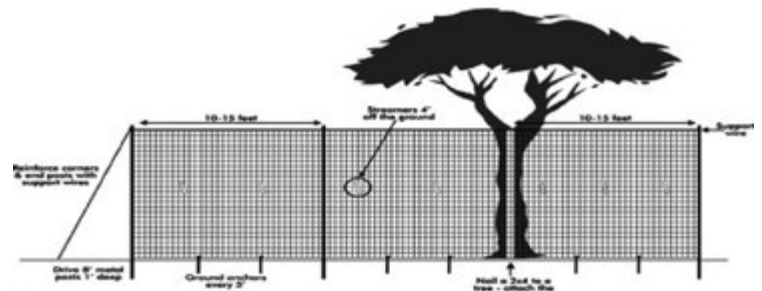

INSTALLATION

- Tubular 1 3/8" pipe rail steel, pressure treated 2" x 4"s or 4" x 4"s, or metal poles should be used and spaced no more than 15' apart. For optimum results, use 10 foot posts which should be buried 3 feet deep. When trees are in installation path, wrap the netting around the tree and pull the fence tight before securing to supports. For additional support, weave a tension wire along the top and bottom of the fence to secure it to the supports.

- Deer are notorious for trying to push under fence! In order to keep them from getting in, be sure the fence netting touches the ground so that you can anchor it using 12" to 18" metal stakes every 8' - 10', or by attaching a running length of wire end to end, securely fastening it to the bottom of the fence. Additional reinforcement of a metal fence or chicken wire may be added to bottom for protection against rabbits and other animals that tend to chew through the fence.

- You will need to attach 12" long white ribbon onto the fence every 10' at a height of 4'. This will allow the deer to see the newly installed barrier, and keep them from running into it. The ribbon should be left up for six to eight weeks. It is most important to place ribbon along areas of high deer traffic and/or time worn paths (we also recommend using a double layer where frequently traveled paths exist).

- Corner posts may need additional support by using braces or support wires to hold them steady.

STEEL HEX WEB DEER FENCE

Eastern
CHAIN LINK
FENCE

Black Galvanized Steel, PVC Coated | 35 lb tensile strength per strand
1" Mesh | Virtually Invisible from Approx. 20'

Item #	Height	Roll Size	Roll Weight	1-4 Rolls	5 Rolls or More
DEERHEX-100-BK	7.5' High - 100' Per Roll	7.5'H x 100'L	80 lbs.		

INSTALLATION

Steel Hex Web Deer Fence is recommended for those experiencing high deer pressure and want a secure, chew-proof barrier for a garden, residential property, or commercial land. This steel fence can also serve as a fence for dogs that like to chew and dig. Built to last, this fence combines aesthetically pleasing hexagonal openings with a UV-resistant powder-coating to protect the steel wire from harsh weather conditions. Combining this fencing with a monofilament tension line makes a stable, strong barrier against deer and rodents including rabbits, squirrels, and gophers.

What makes Steel Hex Web Fencing THE right choice?

- Chew-Resistant
- 1" openings keep all but the smallest pests away
- 20 - 30 yr. life span
- Nearly invisible after 20'

Steel Hex Web Deer Fence is simple enough for anyone to install without the help of a professional. This fence is an incredibly lightweight, yet durable alternative to more costly and complicated fence systems. Installation with our no-dig ground sleeve post system and UV treated heavy duty ties is simple enough for anyone. Once installed, this deer fence will require little to no maintenance.

The UV-resistant coating makes this fencing material incredibly durable and will remain tough even after years of harsh weather. The powder coated black color makes this fence virtually invisible from as close as 20 feet.

Roll Size: 7.5' H x 100' L

Gauge: 20

Life Expectancy: 20-30 years

Mesh Dimensions: 1"

Color: Black

Visibility: Virtually Invisible From Approximately 20'

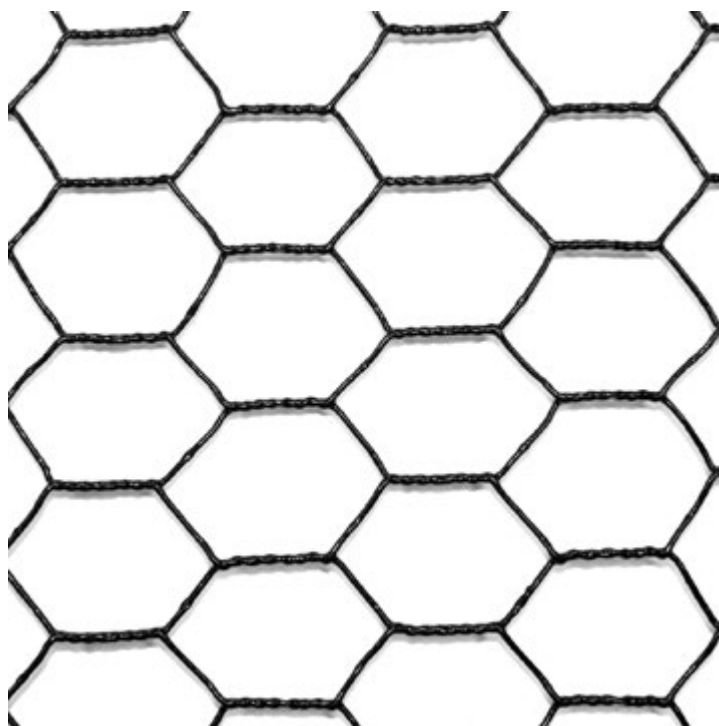

Material: Galvanized Steel, PVC Coated

Weight: 80 lbs.

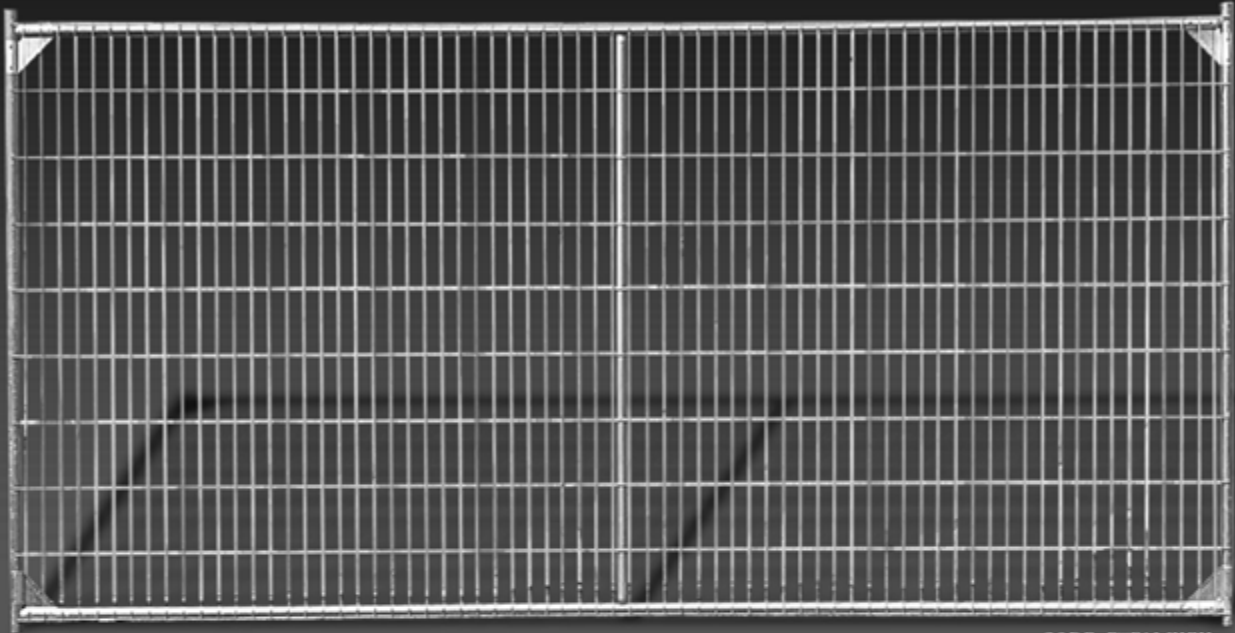

Per Strand: 35 lb tensile strength per strand

Dog Fencing: Can serve as a fence for dogs that chew and dig

Item #	Description	Bndl. Count	Loose	Bundle
EPSGTT	Eastern Privacy Screen Grommet Tie Top (100 ties per bag. 1 bag needed per 100' roll)	24		
EPSGTB	Eastern Privacy Screen Grommet Tie Bottom (100 ties per bag. 1 bag needed per 100' roll)	24		

EASTERN PRIVACY SCREEN

RECOMMENDED FOR USE WITH EASTERN TEMP FENCE

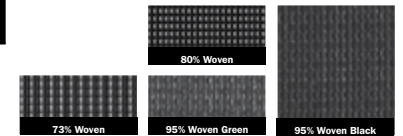

Eastern Privacy Screen is an economical, tape knit that is UV stabilized. Due to it's unique design, it can be installed with or without tape and grommets. It also has a low shrinkage factor and high dimensional stability.

EPS - WOVEN

DESIGNED TO BLOCK SIGHT, WIND, AND STAND UP TO THE ELEMENTS.

Our screens have superior UV resistance for extended life-span and are some of the most rugged outdoor fabrics in the world.

EPS - LATH SHADE

WELL SUITED FOR WINDY APPLICATIONS SUCH AS PRIVACY FENCING OR TENNIS WINDSCREEN.

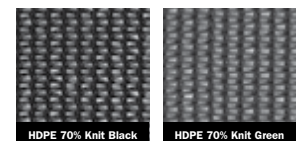

Eastern Privacy Screen Lath Shade is high UV stabilized, strong, long-lasting, and resistant to abrasion. The airflow openings help to reduce stress on structures.

EPS - KNIT WIND SCREEN - (HDPE)

RECOMMENDED FOR USE WITH SPORTS FACILITIES

Great for tennis courts, baseball fields other sports applications. They are made of UV resistant, high density polyethylene. The yarns give the fabric strength and flexibility, and the knitted design ensures against ripping, tearing, and fraying.

EPS - SOLID PRIVACY VINYL

GREAT FOR SENSITIVE WORK AREAS, HIGH SECURITY INSTALLATIONS.

Coated on both sides and gives a 100% visual block. Fire resistant screens also available.

EPS - KNOTTED NET

FOR USE WITH GOLF COURSES, DRIVING RANGES, BATTING CAGES, AND MORE.

Available with many different opening sizes and yarn thickness for different sports and levels of play. Most nets can be bordered with rope or tape and grommets for easy installation.
